ANNUAL PLANNING INFORMATION REPORT FY 1981

JOB SERVICE OF COLORADO

DIVISION OF EMPLOYMENT & TRAINING

Colorado Division of Employment and Training
251 East 12th Avenue/Denver, Colorado 80203

BEST AVAILABLE COPY

PREFACE

This publication was prepared by the Labor Market Information Branch (LMI) of the Colorado Division of Employment and Training (CDET), in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is one of several reports published periodically and provides historical, current, and estimated labor market information for the state, the standard metropolitan statistical areas (SMSA's), the labor market area (LMA), counties, planning regions, and CETA Prime Sponsor areas.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

DESCRIPTION OF THE STATE

Colorado, with an area of 104,247 square miles, is the eighth largest of the fifty states. More than one-third of the land is owned by the federal government and is allocated to national forests, parks, monuments, etc.

Colorado is divided into three major regions: the Rocky Mountains, along which runs the Continental Divide; the rolling high plains to the east of the mountains; and, to the west of the mountains, the extremely rugged terrain resulting from upheaval of the Colorado Plateau during mountain formation.

One-third of the land lies west of the Rocky Mountains, and two-thirds lie to the east.

The mountains are largely responsible for major climatic differences between eastern and western Colorado.

Much of the waterfall flows westerly and away from the densely - populated Eastern Slope.

Much of the eastern plains is comprised of dry cropland, grasslands, and highly-developed irrigated crop and pasture lands. The land is reasonably fertile, needing only ample water for successful crops.

Major development of irrigated land has taken place in the south along the Arkansas River Valley, and in the north along the South Platte River Valley. Weld County is one of the most highly-developed and productive agricultural counties in the U.S.

Mineral resources in the eastern half of the state comprise outcroppings of sandstone, limestone, and siltstone, and subsurface resources include oil, gas, and coal. Construction gravel is mined in many areas.

Many of the high mountain valleys and basins are devoted to pasture, hay, grains, fruit, and vegetable crops. The area running southeast from Mesa County produces major quantities of high-quality peaches, pears, and apples. The San Luis Valley in the south central portion of the state is the major producer of potatoes and other truck garden crops.

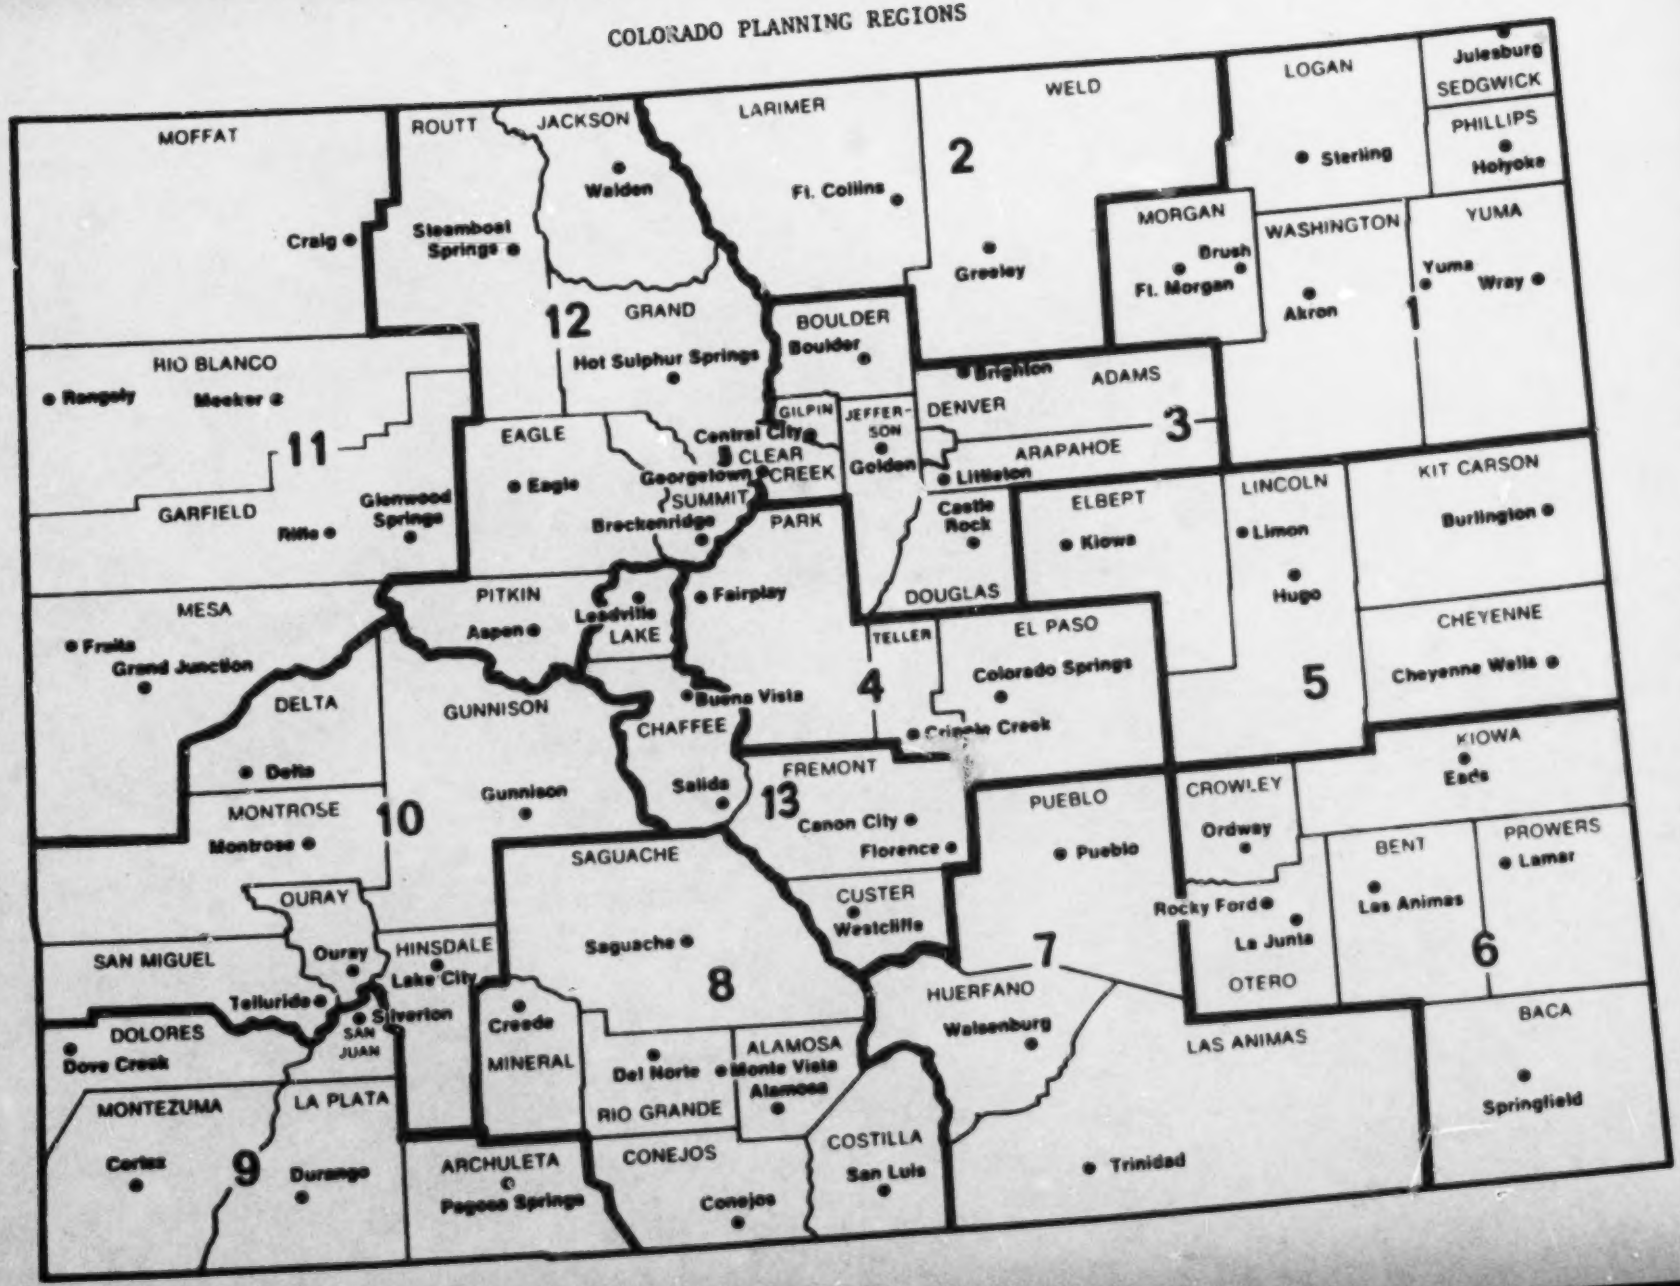
Mineral resources are available in the western half of the state; oil shale, oil, coal, molybdenum, and uranium are the more important resources.

Colorado, because of its mountains, is somewhat of a paradox. It is rich in water, yet it is arid. It is rich in fertile land, but much of this is dry cropland. It is rich in mineral resources, but although substantial development has occurred, much is yet untapped.

Because of the marked differences in the physiography, economy, and sociology of the various areas within the state, the concept of Planning Regions evolved. These are defined as homogeneous geographic areas which share common physical, economic, and sociological problems, resources, and goals.

Regional delineation serves as a basis for effective co-operation and participation by federal, state, and local governments in planning and development.

COLORADO PLANNING REGIONS



HIGHLIGHTS OF THE COLORADO LABOR MARKET IN FY 1981

- Colorado's population has grown by approximately 33 percent between 1970 and 1981.

- the labor force grew by about 57 percent during that same projected period.

- it is estimated that the participation rate in Colorado in 1981 will approach 66 percent, up from 57 percent in 1970. Much of this participation-rate increase has been attributed to females' entering the labor force in large numbers during the past decade.

- it is estimated that unemployment will average 4.0 percent by September 1981, reflecting the recessionary cycle we are currently entering.

- those experiencing the highest rate of unemployment will probably be the black males and females, followed by other minority groups.

- occupational distribution will still find females in the traditional "female-oriented" jobs, earning approximately 59 percent of the employed males' earnings.

- industry growth has been increasing at a decreasing rate in most industries. Construction experienced the highest growth rate, ranking number one, and Retail Trade the lowest as of September 1979. Wage rates increased approximately nine percent for all industries by September 1979, the Mining industry experiencing a 10.3 percent increase to rank first and Retail Trade reflecting an 8.3 percent increase to rank number eight.

- Planning Region 3, the eight-county Denver region, was responsible for approximately 65 percent of the industry employment in over-the-year employment growth as of June 1979. Planning Region 4, the Pikes Peak region, ranked second with about 12.5 percent growth during that same period. The Front Range regions continued their trend of recent years to lead the state in jobs growth. Planning Regions 11 (Plateau) and 12 (Northern Mountain) continued their growth patterns as a result of recreational activities and energy development.

- the occupational outlook for average annual job openings

in calendar year 1981 is estimated to be approximately 92,000, of which 63 percent will be due to growth and 37 percent will be due to replacement demand.

- the three occupational groups comprising more than 52 percent of these job openings, ranked in order, will be Clerical, Service, and Professional, Technical, and kindred workers, with emphasis in this last group on engineers and engineering technicians, store managers, health technologists and technicians, nursing assistants, nurses, and accounting occupations.

- labor supply can best be determined by follow-up of graduates of training, vocational, and academic programs, as well as the skill levels of unemployment insurance claimants and unemployed registered applicants of the Colorado Job Service Centers.

- for FY 1981, it is estimated that approximately 280,000 people will be in poverty, which is about nine percent of the population. In 1970, about 11 percent of the population was in poverty. Of those in poverty, approximately 92,000 will be welfare recipients, with Hispanics representing about 27 to 34 percent of those persons.

- of those applicants registered with the Colorado Job Service Centers during FY 1979, approximately 62 percent were between the ages of 22 and 44. 16.5 percent were Hispanic, 19 percent were veterans, 27.0 percent were disadvantaged, and 27.5 percent had attained an educational level of 11th grade. Almost 53 percent of applicants' skills were concentrated in three categories: Professional, Technical, and Managerial; Clerical; and Services.

INTRODUCTION TO BUSINESS-CYCLE ANALYSES

The nation is currently experiencing a long-awaited downturn in the economy. Economists and labor market analysts have divergent opinions as to when a recession begins, how long it lasts, and what are the most significant indicators to determine troughs and peaks of recessionary periods.

The position papers presented in the following pages give two points of view of measurement of business cycles.

MEASURING THE BUSINESS CYCLE

A Comparison of Responses by the Colorado and National Economies to the 1974-1975 Recession

BY KEN MCNULTY

Correctly defining economic turning points in our economy and relating those points to comparable national downturns and recoveries are crucial if timely and effective economic decisions are to be made by public officials, members of the Colorado business community, and consumers. As we enter the spring of 1980 and the beginning of a national recessionary period, it would seem to be an appropriate time to review some of the assumptions made in the past by local business cycle analysts regarding the timing and severity of national downturn and recovery periods and comparable economic adjustments occurring in the Colorado economy.

Statements are often made locally to the effect that the beginning point of a downturn in our economy lags the beginning of comparable downturns at the national level, and that the length and depth of the Colorado adjustments are shorter and less severe than are the national adjustments. A review of both economies in terms of the employment changes that occurred during the 1974-1975 recession does not seem to support these local opinions.

One method of measurement which may be used to define the business cycle for a particular economy is the graphic presentation of a series that is based on relative comparisons of a particular month's activity in one year and the level of that same activity for the same month during the immediately-preceding year. This type of measurement is known as "over-the-year-change analysis". One of the advantages realized by using this type of comparison in business-cycle analysis is the elimination of the need to seasonally adjust the series being analyzed in order to separate out the trend/cycle components of the series. The over-the-year approach eliminates the judgmental assumptions that must be made by any analyst when computing the relatives used to seasonally adjust a monthly time series.

The line graphs on the following pages plot over-the-year relative changes in private nonfarm and federal-government wage and salary employment for the U.S. and Colorado economies. The time frame covered is from the first quarter of 1973 to the third quarter of 1979 for Colorado, and the first quarter of 1973 through the first quarter of 1980 for the United States.

Colorado changes were derived from the ES202 "Covered Employment" series. National changes were computed using the employment figures published by the Bureau of Labor Statistics in its Employment and Earnings publication. In addition to analyzing total wage and salary employment as defined, relative changes were also plotted for selected industrial divisions. A review of the accompanying graphs will show that an over-the-year graphic presentation defines rather well the cyclical movements of these employment series and delineates the '74-'75 recessionary period for the two economies quite clearly. (See page 15.)

In comparing the two lines shown on Graph #1, it is immediately evident that, when viewed in terms of changing employment growth rates, the Colorado economy started the downturn from its cyclical peak about one year before a comparable turning point was experienced by the national economy. Our economy did not, in other words, lag the national turnaround relative to the beginning of the peak-to-trough portion of the '74-'75 recessionary cycle, when changes in over-the-year employment growth rates are used to define the business cycle for each of the two economies.

Contrary to the position taken by the National Bureau of Economic Research (NBER), it is felt that turning points from cyclical peaks do not accurately reflect the beginning of a recession for a particular economy. By definition, a cyclical peak denotes a point in time where the selected activity being measured has achieved a performance level somewhat higher than would normally be expected, The employment growth rates reflected by the national and Colorado economies during most of the 1973 and early-1974 period were certainly not representative of the average rate of growth in employment we would normally expect during a normal year. The rates being generated were abnormally high; they were at or near the peak for the series. It would seem to be incorrect, therefore, to define the beginning of the recessionary period at that point where, in fact, the two economies were attempting to begin their adjustments to more reasonable rates of growth, to rates that were more in line with a defined norm for each series. It is also felt, of course, that it is equally incorrect to define the end of a recession period at the cyclical trough, a point in time when the selected activity is operating at levels somewhat lower than would normally be expected.

Once we have defined a normal or mean rate of growth for a series, we have at the same time established one type of parameter which can be used to establish the beginning point of a recession. For this particular study, an average rate

of growth was computed for the six-year period beginning in 1973 and ending in 1978. For the Colorado economy, the mean annual growth rate for the wage and salary sectors being used was 5.2 percent. For the U.S. economy, it was 2.8 percent. These points of average growth were used to establish recession lines for the two economies. The beginning of a recessionary period was then defined as that point on the graph where the line depicting the business cycle passed through the economy's mean point of growth, i.e., where the quarterly over-the-year change was less than the rate defined by the recession line. It was at this point that the adjustment period which was begun at the economy's cyclical peak was considered to be complete. Any further downward adjustments were considered to be abnormal and hence marked the beginning of a recession.

It should be noted at this point that the use of an average-rate-of-growth line to define the beginning and ending points for a particular recession in conjunction with an over-the-year-relative-change analysis allows each employment series to be used as (by definition) a coincident cyclical indicator AND A LEADING CYCLICAL INDICATOR AS WELL. Taking Colorado as an example, employment was actually increasing during the period preceding entry into the recessionary phase of the cycle (as is indicated on the graph, growth rates were positive during this period). But the growth in employment was increasing at a decreasing rate, as can be seen by the negative slope of the cyclical line during this period. Had the series been shown in absolute terms, the line would have had a positive slope. By doing the analysis on a relative basis, i.e., plotting percentage changes rather than actual figures, the slope of the line changes from positive to negative and thereby becomes a leading indicator for the series from the point of highest relative growth, the cyclical peak, to that point where the line passes through the average point of growth. The series, in other words, began to decline on a relative basis some twelve months before the economy entered its recessionary phase of the cycle.

Given the above assumptions and the methodology outlined, graph #1 indicates that the Colorado economy began the '74-'75 recession during the first quarter of 1974, dropped to its recessionary trough during the second quarter of 1975, and completed its recovery during the second quarter of 1976. At the national level, the recession began during the fourth quarter of 1974, bottomed out during the second quarter of 1975, and completed the recovery portion of its cycle during the second quarter of 1976.*

Again, these movements seem to contradict, at least for the most part, current thinking regarding the relationships assumed between the downturn and recovery portions of the Colorado business cycle and comparable cyclical movements at the national level. In analyzing the movements for each of the economies, it was found that:

1. The Colorado economy entered its recessionary phase of the cycle some three quarters before that phase was reached by the national economy.

2. The Colorado recession was approximately nine quarters in length, beginning in the first quarter of 1974 and ending during the second quarter of 1976.

3. The comparable recessionary period nationally began in the fourth quarter of '74 and ended in the second quarter of '76.

4. Both economies reached their cyclical trough during the second quarter of '75.

5. The depth of the national recession was moderately more severe than the Colorado experience, with actual employment declines nationally reaching a 3.5 percent negative level, compared to a state decline of about 2.2 percent.

6. Both economies completed the recovery phase of their respective cycles during the same quarter of 1976.

7. The duration of the Colorado recession substantially exceeded the duration of the national recession.

8. Both economies had a somewhat aborted recovery, with moderate downturns being experienced by each shortly after the completion of the recovery period.

A peak-to-peak analysis of the business cycle for those industrial divisions chosen for review would seem to further substantiate the basic premise of this study: that the relationships assumed between cyclical movements occurring locally and comparable events within the national economy for the period under study did not, in fact, occur. Following is a listing by industrial division showing the quarter in which

the defined phase of the business cycle was reached in the Colorado and the U.S. economies:

	Quarter of Occurrence									
	Peak		Recess. Entry		Trough		Recovery		Peak	
	Colo.	U.S.	Colo.	U.S.	Colo.	U.S.	Colo.	U.S.	Colo.	U.S.
All div.	1/73	1/74	1/74	4/74	2/75	2/75	2/76	2/76	1/78	1/79
Constr.	2/73	1/74	1/74	1/75	2/75	2/75	2/76	2/76	1/78	1/79
Mfg.	1/73	1/73	1/74	4/74	3/75	2/75	2/76	1/76	1/79	1/79
Trans.	1/73	1/74	2/74	4/74	3/75	3/75	3/77	2/77	3/78	3/79
Ret. Trade	1/73	3/74	1/74	4/74	1/75	2/75	1/76	1/76	1/78	2/76
FIRE	1/73	1/73	3/73	4/73	1/75	2/75	4/76	4/76	2/78	1/79
Services	1/73	3/74	1/74	1/75	2/75	2/75	4/77	2/76	1/78	1/79

A comparison of the length of the recession for each of these categories shows:

	Colorado	United States
All divisions	9	6
Construction	9	5
Manufacturing	9	5
Transportation and Public Utilities	13	10
Retail Trade	8	5
Finance, Insurance, and Real Estate	13	12
Services	15	5

The major assumptions currently held concerning the Colorado business cycle could probably be best summarized by the statement "the Colorado economy lags the national economy by some four or five months for recessionary entry and recovery periods, and the Colorado adjustments are less severe than their national counterparts." Analyses based on relative changes in selected employment growth rates and coupled with a mean-growth-line concept to define the entry and exit points for a particular recession do not support these conclusions when the 1974-75 recessionary period is used for comparative purposes.

As the national economy enters the 1980 recession, a glance back at those quarters immediately preceding the entry

point indicates that, as was the case in 1973, the Colorado economy began the downturn from its cyclical peak almost one year before the turn was evident nationally. Whether or not the other cyclical phases of the entry and recovery periods of the current adjustment will match the experience of the two economies during the '74-'75 period must remain unanswered until more current data from the ES202 "Covered Employment" series becomes available. Based on the findings presented here, however, it would seem reasonable to conclude that the Colorado economy leads the national economy in the downward portion of the business cycle, and that many of the concomitant movements with the national cycle expected in the future as the Colorado economy "matures" are, in fact, already taking place.

---

*NBER has defined the national recession as beginning in November 1973. From the third quarter of '73 to the fourth quarter of '74 (see #3 above), the employment growth rate for the national economy averaged 4.0 percent. This rate was significantly higher than the average rate of 2.8 percent for the '73-through-'78 period and about twice the rate experienced nationally during the '67-through-'72 period. With an average growth rate for the ten-year period of about 2.5 percent, it is rather hard to visualize the national economy being in a recession during a period when employment was growing at a 4.0 percent rate.

WHERE ARE WE NOW IN THE CURRENT BUSINESS CYCLE?

BY DAVID L. LARSON

Business cycles have been with us for a very long time. According to the National Bureau of Economic Research, Inc. (NBER), business cycle expansions and contractions in the United States date back to 1354. The first trough traced by this service occurred in December 1854. Some 30 months later, in June 1857, the peak of this particular expansion was reached. Since 1945, there has been a total of six cycles; four of them have been considered peacetime cycles. The average length of each cycle since World War II has been 58 months from peak to peak. This cyclic period has been somewhat shorter during peacetime, averaging 43 months. The average duration of actual contractions (peak to trough) has been 11 months in both the four peacetime and two wartime (Korean and Vietnam Wars) cycles since 1945.

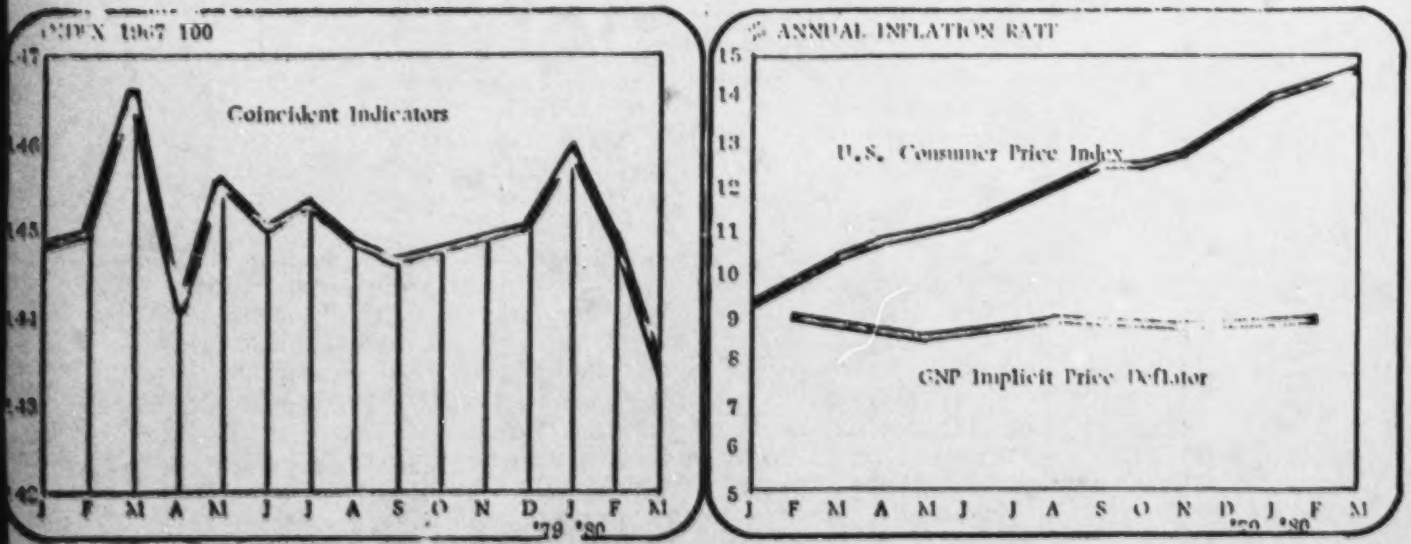
As will widely be recognized by the time this article reaches you, the nation has entered its seventh post-World War II recession. The object of this analysis is to explore where we stand in relation to past business cycles. While the final determination of the starting and ending dates if the present contraction phase will not be made for many months (possibly as late as 1981) by NBER, we can make some definitive judgements. As such, we may be able to get a little clearer picture of our economic future.

What causes these periodic business swings? While most of us would readily prefer an economic climate of steady, continuous growth, we have not been able to avoid these repeated ups and downs. All industrialized nations have experienced this phenomenon; even those countries with planned economies have had stagnating or declining output from time to time. In some cases, this may have been caused by natural disasters (disease, crop failure, etc.).

In the U.S. and free economies of the world, the simplistic progression goes something like this: as the general economy emerges from the low point in each cycle, productivity (a measure of output per constant unit of input - usually man-hours) rises, increasing real wages and subsequently increasing demand. Workers previously laid off are rehired. As consumption of goods and services goes up, the economy strives to meet this demand through increasing its capacity utilization. At this point, the expansion gathers speed. Eventually, maximum capacity in the economy is reached and demand exceeds production. This imbalance creates price inflation (too many dollars chasing too few goods - inflation

known as demand-pull). As the end of the expansion nears, workers, painfully aware of their shrinking paychecks, attempt to stay even through union contracts and settlements. Wage increases are interpreted as a cost of production by business and leads to further price increases, which in turn leads labor to demand further wage increases. This cost-push inflation completes the circle known as the wage-price spiral. Symptomatic of this period are increasingly nonproductive labor disputes. Productivity slows and may even turn negative during these late stages as real wages decline. The onset of recession occurs as savings dwindle and culminate in a cutback in consumer spending. Reductions in sales lead to higher inventories which require adjustments by manufacturers and other producers. Slower hiring and shorter hours may be enough to correct this division in many industries, while layoffs will occur in more adversely-affected ones. Towards the latter stages of a contraction, unemployment rises almost uncontrollably.

Admittedly, we have taken a very fundamental approach to describing what happens in our business cycle. We have, in the name of brevity, ignored many factors. The economics of scarcity, capital investment, governmental regulation, monetary and fiscal policies, the cost of energy, etc. all interact at different levels. We have tried, however, to convey a basic understanding of the process on which these other factors can overlay and upon which we may later build.



Source: U.S. Department of Commerce

When did the recession actually start? Is it just beginning, or is it more than a year old? These questions are the center of a new debate which is just beginning to heat up. Now that the presence of an ongoing recession has generally been accepted, analysts have turned their attention to exactly when it began. There are two camps. Some think it is only just atarting, while others believe it has been underway for a long time. Those who say it began in 1980 point to three quarters of successive growth in real GNP, declining last in the second quarter of 1979 and moving upward each quarter since then. The conventional view is that two quarters of negative GNP growth are needed before a recession can be identified. Others argue that the behavior of industrial production and coincident indicators make it extremely likely that we have been in a recession, or at the very least, in a serious slowdown, for a full year or more. The national coincident indicators series never regained its peak that it hit in March 1979 (146.6). During the last 12 months, the index has fallen 2.2% to its March 1980 level of 143.4. Those who maintain that downturn began in 1979 note that the small gains registered in real GNP beginning in the third quarter of last year may be reversed when major revisions are due in July. This would indicate a probable starting date of April 1979 and certainly vindicate all those economists who forecast a recession for last year.

One of the problems arising in any analysis of real GNP and the coincident indicators series is in the measurement of price inflation each series uses to arrive at constant dollar equivalents. GNP is deflated by the GNP implicit price deflator, while personal-income and manufacturing-and-trade-sales components of the coincident series are adjusted by the Consumer Price Index (CPI). In the past year, the two series have diverged, making comparison increasingly difficult. Annual rates of inflation as measured by the CPI have gone up from nine percent in 1979 to above 14% in early 1980, while the GNP implicit price deflator has remained constant at about nine percent throughout this entire period. This has tended to bias the series in opposite directions.

The relationship between this cycle and the 1973-75 period bears some similarities which are worth mentioning. This coincident index was also relatively flat through the initial months of the defined recession, not turning sharply lower until mid-1974. Some have argued that the actual recession did not begin until this time, and that before the middle part of 1974, we were simply adjusting to the energy-supply situation created by the Arab oil embargo. The final determination, however, was that the contraction began in

November 1973, the first month of decline in the coincident index. We cannot discount the same sort of distortion in the statistics caused by the onset of the Iranian situation, but we should expect consistency from NBER in their determining process.

U.S. UNEMPLOYMENT RATE, TOTAL (PERCENT)

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC

It is quite obvious, however, that NBER is not going to have any clear-cut decision as to the starting point of the recession as is has in the past, unless revisions lead to more perceptible data. The unemployment rate, which slightly leads cycle peaks and lags troughs, hit a low of 5.7 percent several times during 1979 and once (October) in 1978. In the last business contraction, the rate bottomed out one month before the NBER-defined peak. Closer inspection of the current data reveals that the total number of unemployed actually hit its low in October 1978 (5.788 million persons). Another sign that the present economic condition is in its mature stages is the abrupt rise in the unemployment rate which took place in April (an increase of 0.8% from March to seven percent). The speed with which the economy deteriorated last month is indicative of illnesses present for some time. The development parallels the last recession, when the first big jump in the unemployment rate occurred between August and September 1974 (5.4 to 5.9 percent), several months after the November 1973 peak. At that point, interest rates began their steady decline (as is happening now), and the unemployment rate went up sharply, hitting its high of nine percent only nine months later (two months after the March 1975 defined trough).

Assuming that we are in about the same position now (April 1980) as we were way back in September 1974, and considering the relative steepness of the current economic decline, the trough of this downturn could occur as early as

September or October of this year, with unemployment stabilizing in early 1981.

It is expected that the correction will be sharp in the second and third quarters, however, with real GNP declining at a -5% annual rate or greater in each period. Unemployment will again approach nine percent by year's end. Colorado could show close to zero employment growth over the next two quarters, with the unemployment rate reaching 4½% by late 1980. Energy development will keep the Rocky Mountain states stronger than many other parts of the country. Regional economics will play an important role in determining which areas will be hit the worst.

As we have seen in the past two months (March and April), the economic scene can change suddenly. Concern over inflation has now become less intense and worries are now centered upon growing economic weakness and poor corporate profits. Talk of wage and price controls, which were once ruled a possiblility, have faded, while shortages of gasoline of a year ago have yielded to growing stockpiles of oil. Further expected rapid rises in the unemployment rate are expected to continue throughout the summer months and will most certainly lead to a switch from monetary restraint to fiscal stimulus later in the year. Indeed, this is already taking place. The Federal Reserve Board has recently taken steps to reduce credit restraint in the open market and has removed its three-percent surcharge on the discount rate it charges large banks. Soon the FED may lower its rate from 13% to 12% in order to bolster money-supply growth, which has declined sharply in the past couple of months. Short-term interest rates have dropped from near 16% to below ten percent between the middle of April and the first week of May, while the prime rate banks charge their major customers has slid from 20% to 17% in just three weeks, indicating substantially lower loan demand. The prime rate will fall throughout the remainder of 1980, as the economy continues to weaken, to near ten percent by year's end.

Do recessions really work in slowing inflation? Evidence suggests that they do. Inflation peaked at over 12% in December 1974, a full year into the last recession. Two years and one recession later, the rate was down to five percent or less than one-half its peak. Even moderate downturns have been largely successful in reducing inflation. The 1969-70 recession, in which unemployment peaked at six percent, reduced inflation again by more than one-half, from above six percent in early 1970 to less than three percent by the summer of 1972. Experience tells us that today's deepening slump will eventually bring a marked reduction in the rate of the increase in prices. Inflation at near 15% in March at or near its peak will show slow improvement at first, but could be down to as low as six percent late next year as the economy works its way through a slow recovery period.

Lately, price softness has become apparent in many markets including food, housing, and even energy costs. Gasoline consumption in the first quarter was ten percent lower than in the same period in 1979, and this reduction in demand is beginning to have a stabilizing influence on oil prices. The level of inventories which have been kept lean up to this point will mitigate against a more severe recession, but will build as the economy worsens. This will force liquidation of existing stocks, resulting in retailers' discounting as they try to move merchandise quickly.

Interest rates have played an integral part in bringing a stop to inflationary expectations. They represent a balance between supply and demand of loanable funds, and as such, approximate the true cost of doing business in an inflationary environment.

What about our future, and how can we solve our long-term inflationary problem? While we expect the rate of inflation to drop significantly over the next two years, what can we do to avoid a similar buildup of prices over the course of the next cycle? Arguments for wage and price controls have never been very convincing and have misread entirely the social and political tone of the country today (for less governmental interference, not more).

The three points outlined below I consider to be essential ingredients of any long-term anti-inflationary program.

1. Increase productivity by providing business-tax incentives for investment in new capital equipment and energy technologies. Increase spending on R & D programs.

2. Don't overstimulate the economy prematurely with tax cuts and easy money in overreaction to rising unemployment. Let the economy fund its own way back to balance. Cut government spending. A balanced budget could have a powerful psychological impact, even though having a minor influence in reducing inflation (history tells us that we've had bad inflation in times of surplus, while other countries right now are experiencing low rates of inflation with budget deficits much larger than ours). Reexamine our present tax structure.

3. All Americans and American businesses need a renewed sense of commitment to the American way of life and a resolve to tackle our problems.

THE NATIONAL ECONOMY

BY HELEN RUBENSTEIN

The announcement that the unemployment rate had reached 7.0 percent in April affirmed the conviction that the long-awaited recession is now upon the American economy.

Other evidences of this recession abound:

- employment growth has been increasing at a decreasing rate. In January 1979, nonfarm wage and salary employment, excluding state and local government, was growing at approximately 6.1 percent over the year. By December 1979, the over-the-year growth rate was down to 3.7 percent, and by March 1980, the growth rate was down to 1.8 percent. It is anticipated that there will be negative growth by the time the recession reaches its low point and the economy begins its upturn.

- U.S. auto producers retailed approximately 28 percent fewer cars in April 1980 than during last April. The sales of most foreign cars showed declines as well.

- layoffs in the housing industry have been substantial in all regions. It is estimated that housing starts will drop by about 45 percent this year.

- consumer prices have continued to push upward, and the increase in the Consumer Price Index in March 1980 was 14.7 percent over March 1979.

- jobless claims increased sharply in the week ending April 19, to 605,000 from 574,000 the week before. Prior to that, the number of new claims during the first quarter of 1980 hovered around the 400,000 level.

- a lowering of all interest rates commencing in April as a result of the economy's rapid deterioration and the declining demand for credit.

- the insecurity of the dollar internationally. If credit restraints are dramatically reduced, the international value of the dollar will diminish further in coming months.

A study by the Rutgers Center indicates declining business abroad in France, Great Britain, and West Germany. A slump in major industrial countries could have the effect of deepening the recession in the U.S. and affecting the value of the international dollar further.

It is conceivable that the pressures of the election in November will influence executive and legislative decisions to mitigate the recession and force a turnaround by the fall or early winter of 1980. Legislation and policy decisions that would effectuate such change could include some or all of the following:

- introduction and immediate passage of jobs programs to mitigate the high unemployment rate that will hover in the eight-to-ten-percentage range by late summer. This easing of fiscal policy will result in putting people back to work, but it will play havoc with the administration's plans to balance the budget, and more seriously, will interfere with the reduction of the Consumer Price Index.

- another politically popular policy will be to implement some form of tax credit by mid- or late summer. This action to pump additional money into the economy, while resulting in a favorable impact upon unemployment and consumer demand, will again influence the inflationary spiral upward.

- passage of legislation to subsidize housing to help pull the contruction industry out of its trough, combined with the decline of mortgage rates, would also be a popular and somewhat successful stimulus to business and employment.

- continuing the policy of the Federal Reserve to allow interest rates to slide as it escalates its efforts to bolster the nation's money supply.

- implementation of mandatory wage and price controls, which would counteract the further inflation that the other measures alone would create. The combination of adjusted fiscal and monetary policies and wage and price controls would ease unemployment, succeed in lowering the inflation rate, and stimulate business. It has been argued by many economists that wage and price controls do not work. Evidence indicates that they were quite successful when implemented during the Second World War, the Korean War, and even during Nixon's years in office. The failures have occurred when the controls were taken off abruptly. Controls should be implemented as part of a package to deal with the structural sources of inflation which would include improving productivity, holding down oil imports, limiting the creation of domestic credit, and cutting wasteful spending.

It can be concluded that if these measures are adopted, moderate growth will be evident during most of Fiscal Year 1981.

An alternate scenario which is highly likely could also result in an upturn by late fall or early winter which would be short-lived, and another downturn would occur by the summer of 1981. Recovery from this cycle would not be evidenced until early fall of 1981 or later.

This situation could come about because this is an election year, and we cannot ignore the political pressures and motivation of the administration and Congress. Therefore, it is conceivable that fiscal policy will be eased by tax credits and/or jobs programs. Monetary policy would continue its easing on interest rates, but mandatory wage and price controls would not be implemented.

The cooling-down of the inflationary cycle would come to a halt as employment and demand for goods increased. The easing of credit would further stimulate business and consumer borrowing with the consequences of a devalued dollar abroad, as well as an upward swing of the Consumer Price Index. This inflationary upswing could trigger a tightening of both fiscal and monetary policies about spring of 1981, with the result of a second trough's occurring sometime in the summer of 1981. With the election over, it is conceivable that the recovery that time would not be speeded up by legislative or administrative measures and therefore would be gradual, with the result that the inflation rate would still remain at double-digit levels during Fiscal Year 1981.

Whether price controls are initiated or not, sometime in the near future the administration and Congress will be forced to deal with the structural sources of inflation.

THE COLORADO ECONOMY

Fiscal Year 1981 will find the Colorado economy experiencing a decline in employment growth, such decline having started as far back as March of 1978. Over-the-year growth of total nonfarm wage and salary employment peaked at approximately 11 percent in March 1978. Overlooking normal monthly fluctuations, the growth rate continued to increase at a decreasing rate, and by September 1979 was down to 7.5 percent. As of March 1980, over-the-year growth in employment was down to 4.5 percent.

The Construction industry experienced a similar pattern. A peak over-the-year growth rate of 21.9 percent was experienced in March 1978. By September 1979, over-the-year employment growth was down to 13.4 percent, and by March of 1980 had decreased to approximately 10.8 percent. All major industries were showing decreased over-the-year growth rates from September 1979 to March 1980, with the exception of the Mining industry. Despite the fact that the unemployment rate in Colorado has managed to stay in the 3.0-3.3 percent range, during the twelve-month period from March 1979 to March 1980, the declining growth rate is indicative that Colorado has been experiencing a slowdown in the economy for almost two years. Measures taken nationally to mitigate the depth of the recession will influence Colorado, but it can be expected that the unemployment rate will be inching up into the summer months of 1980. Passage of fiscal and monetary measures during the next few months will stimulate the badly-hit Construction industry, and, with a rise in construction, affiliated industries will see some improvement too. Consumer spending will increase if tax credits, jobs programs, and eased credit controls become available. If wage and price controls are implemented, the inflation rate can be expected to decline, and moderate growth to continue. If, on the other hand, fiscal and monetary measures are implemented without the concomitant controls, Colorado will probably experience another spiral of increased inflation as a result of the increased demand for consumer goods and credit, as well as a downturn that will last for the rest of Fiscal Year 1981.

POPULATION AND LABOR FORCE OUTLOOK

Between 1970 and 1979, Colorado's labor force grew by

approximately 57 percent. It is estimated that its population grew by approximately 33 percent. In 1970, the population 16 years old and over was 1,515,782, and the civilian labor force as reported in the Census was 862,133, indicating a participation rate of 56.9 percent. The projection for the 16-years-old-and-over population for FY 1981 is approximately 2,303,275, and the projected civilian labor force is 1,529,600, indicating that the participation rate will be approximately 66.4 percent. The national participation rate of the civilian labor force was 59.0 percent in 1970, greater than Colorado's, but the rapid growth of this state, particularly in the working-age population, has caused the participation rate to exceed the nation's in 1979. In 1979, approximately 80 percent of the net immigration to the state of Colorado was of persons between the ages of 25 and 44, according to the driver's license statistics, and it is projected that the participation rate will approximate 66 percent. The annual average unemployment rate for 1980 is expected to range between 4.0 and 5.0 percent, due to the onset of the recession this spring. The projected unemployment rate of 4.0 percent for FY 1981 is based on the assumption that policies to mitigate the current recession will not include wage and price controls, and that both Colorado and the nation will enjoy a temporary upturn in the economy effective in the last quarter of 1980 that should reach its peak during the summer of 1981 and then turn down again during the July-September quarter of 1981. If controls are implemented, a continued upturn could be effected and then the estimated annual average unemployment rate could be slightly lower than 4.0 percent.

It can generally be expected that unemployment in Colorado by race/ethnicity and sex will follow the patterns of the nation. Black males and females experience the highest unemployment rates, followed by the Hispanics and other minorities. Among the white non-Hispanics, the female experiences higher unemployment than her male counterpart.

Employment distribution occupationally will find females traditionally represented in the teaching and health occupations, the clerical, service, and operative occupations. Males will be employed primarily in the professional, technical, managerial, crafts, and operative occupations. The occupations which employ males in greater numbers than females command higher average wages. Most females are still concentrated in those occupations which pay minimum or low average wages.

[1] "Vietnam Era" is officially defined as the period between August 5, 1964 and May 7, 1975
[2] Officially-defined period between end of Korean Conflict and beginning of Vietnam Era

Note: Veterans who served in more than one period are counted only once.

INDUSTRY EMPLOYMENT AND OUTLOOK

By September of 1979, private nonfarm wage and salary employment had increased by approximately 75,500 jobs at an 8.6 percent annual average over-the-year growth rate. Although this reflects a fairly healthy growth rate, it is down from the 80,000-job growth of September 1978 over September 1977.

Overall average weekly wages were $243.77 in September 1979, reflecting a 9.1 percent increase over 1978, or a $20.39 increase.

The following table ranks the industry growth and average weekly wages as of September 1979 by major industrial sector:

Industry Sector	Growth Rate	Rank in Growth Rate	Industry Sector	Wage Rate	Rank
Construction	10.4	1	Mining	$ 422.85	1
Mining	9.9	2	Transportation and Public Utilities	342.10	2
FIRE	9.7	3	Manufacturing	304.20	3
Transportation and Public Utilities	9.2	4	Wholesale Trade	303.72	4
Services	9.1	5	Construction	296.00	5
All Industries	8.6	-	All Industries	243.77	-
Wholesale Trade	8.6	6	FIRE	243.64	6
Manufacturing	8.5	7	Services	194.84	7
Retail Trade	5.5	8	Retail Trade	153.74	8

Analysis of the 75,500-job growth during the first nine months of 1979 by industry sector reflects the following:

Mining: over-the-year growth in Mining maintained the same position it did in 1978; the growth rate of 109.9 percent was second only to that of Construction. Despite the fact that Mining represents approximately three percent of total nonfarm private wage and salary employment, growth in this industry is carefully watched and valued, due to the fact that Colorado has such rich stores of coal, oil shale, and gas. It is anticipated that growth in this industry will be less affected during the recessionary cycle than other more volatile industries such as Construction and Retail Trade.

The Mining industry ranks number one in paying the highest average weekly wage of $422.85 as of September 1979. This

wage reflected an approximate ten percent increase over September 1978, the highest increase of all the major industry sectors.

Construction: Construction growth during the first three quarters of 1979 averaged 7449 jobs over-the-year, as compared to approximately 10,000 jobs in over-the-year-growth in 1978. This decreasing rate of growth started as far back as as February 1978, and continued down until the second quarter of 1979, at which time a decided increase became evident. It is not anticipated that the Construction industry will reflect any sizable growth rate until the summer of 1980, when the effects of the easing of monetary restraints in conjunction with some implementation of fiscal programs to stimulate the economy trickle down to the consumer.

Average weekly wages in September 1979 in the Construction industry were $296.00, approximately $26.00 more than in September 1978, and reflecting a 9.8 percent over-the-year increase.

Manufacturing: total job growth in September 1979 as compared to one year earlier showed 13,900 jobs for an 8.5 percent growth rate. Decreasing rates of growth in this industry did not become evident until February 1979, several months later than in Construction and Mining. Part of this growth may be due to the strength of technological industries in the state which produce machinery and electrical and electronic equipment. These subindustry durable-goods sectors are reflecting healthy growth during this period.

Average weekly wages for this period were $304.20, as opposed to $281.49 in September 1978. This was an 8.1 percent increase that amounted to $22.71 more per week in September 1979.

Transportation and Public Utilities: average growth in this industry sector as of September 1979 was approximately 5600 jobs, for a 9.2 percent growth rate. The peak growth rate of 12.5 percent occurred in September 1978. It is highly likely that this industry sector is in for some significant problems in the near future. The airline industry has been experiencing a considerable drop in the numbers of passengers, both vacationing and business. Part of the problem is the higher costs of flight passage due to the high costs of fuel, and another reason is the downturn in the economy. Both businessmen and commuters tend to cut down on air flight during an economic crunch. Another cause may be the increased competition as a result of deregulation, which has caused

airline agencies to promote money-saving packages which have cut into profits considerably.

Although the railroads will make some gains as a result of the high energy costs in this industry sector, the losses due to air and trucking may not be sufficient to maintain growth rates as high as those experienced during 1978 and 1979.

Average weekly wages in this industry sector as of September 1979 were $342.10, approximately $23.46 greater than September 1978's wages, reflecting a 7.4 percent increase.

Wholesale Trade: this industry sector showed strength and growth at an increasing rate until April 1979, and the decreasing growth rate has been gradual through September of 1979, showing an average growth of 8.6 percent and an absolute growth of approximately 5600 jobs.

Average weekly wages in September were $303.72, reflecting an increase of $24.88 over September 1978, an 8.9 percent increase.

Retail Trade: this is a much more volatile industry sector and reached its peak growth rate of 10.8 percent in March 1978. This industry sector has been experiencing a declining rate of growth, and the average rate as of September 1979 was 5.5 percent, reflecting absolute growth of about 11,650 jobs. As the recession becomes more severe, this industry will experience greater decreased growth rates, particularly in the general merchandise, apparel, and automotive-dealer subsectors.

Average weekly wages as of September were $153.74, reflecting an 8.3 percent increase over 1978 wages, amounting to $11.74 more per week. This industry sector reflects the lowest average weekly wage of all the major industry categories.

FIRE: this industry has experienced considerable growth since the last recession, more dramatic than that of the other industry sectors. A brief historical review shows over-the-year growth rates from 1975 on to be 1.0 percent in December 1975, 4.3 percent in 1976, 7.9 percent in 1977, 11.0 percent in 1978, and 9.7 percent in September 1979. Growth peaked at 11.5 percent in March 1978 and decreased gradually until March 1979, then shot up to 11.1 percent in April, after which time it is expected that the decreased growth rate will continue until the recessionary cycle reaches its trough.

The average weekly wages paid in this industry sector were $246.11 as of September 1979, $22.63 more than in September 1978 and reflecting a 10.1 percent increase. The average weekly wages in this industry ranked sixth, but the rate of increase ranked second. This high rate of increase was probably due to the rapid expansion and the rather low base this industry reflected.

Services: over-the-year growth in Services jobs as of September 1979 was approximately 19,000, a 9.1 percent rate of increase. This industry sector reached a peak growth rate in March 1978, at which time growth increased at a decreasing rate until the second quarter of 1979. As of the third quarter, the Services sector is following the pattern of all other industries and is experiencing a decreasing growth rate.

Average weekly wages in this industry sector, at $194.83, are the second-lowest wages paid. The percent increase of 9.4 over September 1978 amounts to $16.80 per week.

COLORADO PLANNING REGION DEVELOPMENTS SECOND QUARTER 1978 THROUGH SECOND QUARTER 1979

BY WILLIAM ANDERSON

The last two or three years have been years of significant economic growth in Colorado. This prosperity has brought good job opportunities to many state residents and persons migrating to Colorado. From 1975 to the second quarter of 1979, total employment has grown nearly 292,000, while unemployment has declined by 13,000. While most people in the Denver and other Front Range areas are well aware of the expansion, not all areas of the state have participated to the same degree. The 63 Colorado counties have been aggregated into 13 planning and management regions (see map).

Looking at the twelve-month period, second quarter 1978-1979, illustrates the recent trends in the geographical demand for workers. The second quarter of 1979 is the most recent period that the Colorado Division of Employment and Training has input actual employee counts by industry for each county from the 71,800 employer unit- in the state.

Nearly 69,000 new nonagricultural wage and salary jobs were created during this period statewide. Of these, 65% or 44,800 were in the eight-county Denver area, Planning Region #3. The Manufacturing sector was the leading gainer. Planning Region #4, the Colorado Springs area, was second in growth, with 12.5% or just over 8648 of the total new nonagricultural wage and salary jobs. Manufacturing jobs led the way in the Colorado Springs area, with Trade second.

The Greeley-Fort Collins area (Planning Region #2) continued its rapid expansion and gained 5042 workers. As in the Colorado Springs area (Planning Region #4), the Manufacturing and Trade sectors added the most jobs. It is interesting to note that growth in Weld County has slowed significantly, while Larimer County continues to add workers, both in established operations and firms new to the area.

The Pueblo area (Planning Region #7) recovered from years of cutbacks at the Army Depot and the ups and downs of the primary metals industry and gained over 2100 jobs in this period, with the Services and Construction segments accounting for most of the growth.

State growth trends continue to show an extreme concentration of employment opportunities along the Front Range.

In the one-year period presented here, 87.9 percent of all new nonagricultural wage and salary jobs were created in the Front Range regions from Greeley-Fort Collins in the north to Pueblo in the south - just about the same proportion of employment they had in 1970.

Outside this area, only two Planning Regions drew a significant proportion of the state's new nonagricultural wage and salary jobs. Spurred by strong winter and summer recreational activities and continuing energy development, Planning Regions #11 (Plateau) and #12 (Northern Mountain) together gained over 7506 jobs in the 1978-1979 second quarter period - over 10.9% of all new state jobs. Mining employment scored good gains, but Service, Trade, and Construction were the industries accounting for a major portion of the new jobs in the two regions. Planning Region #1 (Northeastern Colorado) and Planning Region #13 (Upper Arkansas Valley) each managed to generate at least one percent of the additional nonagricultural wage and salary positions during the year. Unfortunately, Construction employment in Region #13 declined 21.9% (233 jobs) in fourth quarter 1978 and 33.1% (372 jobs) in second quarter 1979. The industry posted steady gains over the prior three years in connection with large projects on the Frying Pan-Arkansas River and Cotter Corporation's new uranium ore processing mill.

Planning Region #10 (Black Canyon) showed fairly good employment growth, but a decline in food processing and metal mining activities with a general slowdown after a few years of rapid growth held the number of new jobs to 881 or 5.5 percent.

Only two Planning Regions, #8, the San Luis Valley, and #9, the San Juan Basin, declined in total labor force and nonagricultural wage and salary employment from second quarter 1978 to second quarter 1979. Both had losses in several sectors throughout 1978 and into 1979. By second quarter 1979, Region #8 had declined 6.7% or by 159 jobs in Trade and 3.6% or by 149 jobs in Government from second quarter 1978. These losses outweighed a 154-job increase in Mining. In Region #9, five of the eight major industry sectors declined. The biggest loss came in Mining employment, 200 jobs, when the Sunny Side Mine flooded in June of 1978.

Unemployment declined in all of the Planning Regions except #1 from second quarter 1978 to second quarter 1979. The total unemployment for the state declined 3000 and the rate of unemployment dropped 0.4 percentage points, from 3.7% to 3.3%. This was a considerably slower rate of reduction in the unemployment rate that the one-percentage-point change

that occurred from 1977 to 1978. Region #1, the South Platte Valley, recorded an increase in unemployment despite a 3.8% increase in nonagricultural wage and salary employment. Regions #8 and #9 had fairly large decreases in unemployment, 1.5% and 0.6% percentage points respectively, even though total wage and salary employment declined. These two regions are the only ones that had a reduction in their labor force. All other regions had at least a 0.2-percentage-point drop in unemployment in conjunction with employment gains. Within this group, the Northern Mountain Region (#12) reduced unemployment the most 1.1 percentage points. Most of the reductions in unemployment rates of the remaining regions were due in greater part to increases in employment than to significant reductions in the number of persons unemployed. The unemployment rate in Regions #2 through #6 and in #11 were below four percent by second quarter 1979. During an economic upturn, the number of unemployed persons drops, as well as the rate of unemployment, and there are increases in total employment. This happened from 1975 into 1978. Starting with 1979, the number of unemployed persons declined at a slower rate, while gains in total employment reduced the percentage the unemployed were of the labor force. The Denver-Boulder LMA's unemployment rate dropped 0.4 percentage points from second quarter 1978 to second quarter 1979, with only a 1300 decline in unemployment. The reduction was more attributable to the 53,600 increase in total employment.

In conclusion, the Colorado economy has been very prosperous during the last few years. Overall, job growth has been at record levels. Except for the regions affected by energy development and winter/summer recreational activities, nearly all of the new nonagricultural wage and salary jobs have been concentrated in the Front Range areas of the state. Unemployment continued to decline in all areas except one.

1/ Residents unemployed during the week including the 12th of the month.
2/ Establishment employment adjusted for multiple job-holding and commuting. Includes persons involved in labor disputes.
3/ Includes self-employed, unpaid family and domestic workers.
4/ Park County included in total wage and salary employment only. Industry figures shown are for Colorado Springs SMSA.
5/ Mining Employment shown is for Weld County only. Larimer County Mining Employment included in Services.
6/ Expanded unemployment insurance coverage beginning in January 1978 in the local government sector has led to a more thorough and accurate estimate of government employment in the various labor areas of the State. For most areas, the published government employment levels were underestimated in the prior years. This change does not materially affect the Statewide or Denver-Boulder LMA government employment levels as they were independently derived.
* The total of regional employment estimates exclude approximately 17,500 multicounty workers.

D - Disclosure. Mining Employment included in Service Industry.

PERCENT CHANGE IN TOTAL NONAGRICULTURAL WAGE AND SALARY
EMPLOYMENT BY PLANNING REGION
Second Quarter 1978 - 1979
(Jobs by Place of Work)

	PLANNING REGIONS	Total Non Ag. Wage & Salary Emp. 1978 -Second Quarter- 1979		Increase (Decrease) In Jobs	Percent Change 78 - 79	Percent of All New Jobs Statewide*	Major Industry of Growth
1.	South Platte Valley	18,297	18,999	702	3.8	1.0	Trade
2.	Northern Front Range	88,564	93,606	5,042	5.7	7.3	Manufacturing
3.	Denver-Boulder LMA	728,700	773,500	44,800	6.1	64.9	Manufacturing
4.	Pikes Peak	95,671	104,319	8,648	9.0	12.5	Manufacturing
5.	High Plains	4,915	5,002	87	1.8	0.1	Trade
6.	Lower Arkansas	15,142	15,458	316	2.1	0.5	Trade
7.	Spanish Peaks	49,801	51,976	2,175	4.4	3.2	Services
8.	San Luis Valley	10,883	10,828	- 55	- 0.5	0.0	Mining
9.	San Juan Basin	16,500	16,081	- 419	- 2.5	- 0.6	Fin., Ins. & Real Estate
10.	Black Canyon	15,989	16,870	881	5.5	1.3	Trade
11.	Plateau	42,157	45,035	2,878	6.8	4.2	Trade
12.	Northern Mountain	24,675	29,303	4,628	18.8	6.7	Fin., Ins. & Real Estate
13.	Upper Arkansas Valley	15,585	16,815	1,230	7.9	1.8	Government

* Total Statewide change in new jobs will not equal the sum of the Planning Region's because multicounty workers are included at the State total level only. Total increase was 69,000 jobs from Second Quarter 1978 to Second Quarter 1979.

OCCUPATIONAL EMPLOYMENT OUTLOOK

BY PATRICK BRANNIGAN

Information on occupational employment and job openings for the state has recently been produced from data collected by the Occupational Employment Statistics (OES) survey, a cooperative project of the federal Bureau of Labor Statistics (BLS) and the Colorado Division of Employment and Training. The data, comprising base-year estimates of employment for 1976, projected employment levels for 1982, and corresponding annual average job openings, is derived from OES establishment-sample survey results covering nearly all detailed industries in the state. Supplementing data for non-OES-surveyed industries was derived from the 1970 Census, special surveys of hospitals, railroads, religious institutions, and educational institutions, and from federal payroll records. Job openings were calculated as the sum of growth and replacement demand.

Justified by the "short-term" interval (1976-1982) of the projections, base-year staffing patterns were presumed to remain relatively constant, and the occupational ratios observed in the base year (1976) were used in the projected year (1982) as well. Job openings due to growth were derived as the difference between projected employment for each occupation and the corresponding base-year employment estimate. Separation rates developed from historical and projected (1980) mortality and labor force participation rates for Colorado were used to estimate job openings resulting from death, retirement, and other reasons for leaving the labor force. These rates did not reflect job openings due to labor turnover or occupational mobility.

For 1981, the average annual numbers of job openings is estimated to be 92,249, of which 59,428 (63%) are due to growth and 34,821 (37%) are due to replacement demand. The distribution of job openings by major occupational group is as follows:

MAJOR OCCUPATIONAL GROUP	OCCUPATIONAL CODE	NUMBER	PCT. OF TOTAL	PCT. OF 1982 EMPL.	OPENINGS DUE TO GROWTH	OPENINGS DUE TO SEPARATION
TOTAL ALL OCCUPATIONS	00000000	94249	100.00	6.94	59428	34821
PROFESSIONAL, TECHNICAL, & KINDRED	10000000	15350	16.29	6.34	10092	5258
MANAGERS & OFFICERS	20000000	9765	10.36	7.49	5709	4056

MAJOR OCCUPATIONAL GROUP	OCCUPATIONAL CODE	NUMBER	PCT. OF TOTAL	PCT. OF 1982 EMPL.	OPENINGS DUE TO GROWTH	OPENINGS DUE TO SEPARATION
SALES WORKERS	30000000	6587	6.99	7.32	3747	2840
CLERICAL	40000000	19079	20.24	6.89	11384	7695
CRAFTS & KINDRED	50000000	11107	11.78	6.85	7831	3276
OPERATIVES	60000000	10085	10.70	6.54	7128	2957
SERVICE WORKERS	70000000	16725	17.75	7.53	10125	6600
LABORERS	80000000	5552	5.89	6.94	3413	2139

Within these major occupational groups, the nineteen detailed occupations which are expected to account for one thousand or more job openings for the year are as follows (in rank order):

DETAILED OCCUPATIONS WHICH ARE EXPECTED TO HAVE 1000 OR MORE JOB OPENINGS IN 1981

OCCUPATIONAL TITLE	NUMBER OF JOB OPENINGS
Sales workers	6587
Stenos, typists, secretaries	4120
Teachers	3433
Sales clerks	2940
Waiters	2696
General clerks, office	2372
Bookkeepers	2011
Cashiers	1564
Cooks, except private	1506
Engineering, science technicians	1322
Engineers	1310
Managers, store	1289
Health technologists and technicians	1264
Truck-driving occupations	1263
Nursing assistant occupations	1209
Stock clerks, storekeepers	1141
Nurses and physician's assistants	1131
Accounting occupations	1070
Blue-collar-worker supervisors	1019

The demand for labor is a "derived demand" dependent upon market conditions for the product for which the labor is an input or productive factor. Labor is not an homogeneous

commodity, but within any specific occupations, labor units can be regarded as perfect substitutes. Conventionally designated the "demand component", job openings represent for any given occupation the excess quantity demanded of labor at the prevailing wage in the relevant labor market. The existence of a non-zero excess quantity demanded may be due, if trained labor is available, to friction in the labor market, imperfect dissemination of information about the vacancies, labor unions or other barriers to entry, or a low prevailing wage. Otherwise, such excess quantity demanded indicates a lack of persons meeting the qualifications required for the occupation. In the absence of supply and wage information corresponding to the "demand component", a precise delineation of the market situation which exists is not feasible. In providing projected job openings information and similar data, the aim of labor market information projects funded by CETA, such as the OES project, is to reduce friction in the labor market, improve dissemination of information, and to indicate those training strategies which will provide persons trained for the job openings which are expected in the near future. By bringing people and jobs together, the basic objectives of CETA are met. Job openings data is a step in that direction. Over the interval 1976-1982, the expected average annual job openings for selected detailed occupations is presented in the tabulation which follows.

COLORADO AVERAGE ANNUAL JOB OPENINGS 1976-1982 FOR OES SURVEY-BASED MATRIX OCCUPATIONS

OCCUPATIONAL SUPPLY

Occupational demand, as discussed above, is one side of the economic equation; the supply side is equally important, and more difficult to determine. Labor supply in a labor market area is a composite of persons trained for specific occupations, those who migrate to a labor market area, those persons who move from one occupation to another, and those who receive on-the-job training to equip them with specific occupational skills.

The flexibility with which persons become trained in specific occupations reduces the feasibility of determining absolute supply to be juxtaposed with demand that would help to create equilibrium in the market.

Nevertheless, planners and counselors require some information to justify their program plans.

Some of the sources of supply at the professional-technical level would be the universities and colleges within a labor market area.

Vocational training programs would be another source. The limitation of these supply sources, of course, is the fact that followup of graduates is not usually done. Therefore, it becomes impossible to determine what proportion of those trained in specific occupations remain in the labor market area and remain in the same occupation as trained.

A third source that the CDET could deliver to planners is the occupational skills of those applicants seeking employment. This source, coupled with job openings information from employers in the labor market, plus some data concerning unfilled job openings, could describe one phase of the labor supply/demand ratios in a given labor market.

In conjunction with the listing of demand occupations during 1981, we have also developed a listing of job openings received by the CDET during FY 1979, including the minimum, average, and maximum wage rates offered by the employers, the years of education required, and the months of experience required. Selection of these occupations was based upon the fact that CETA Prime Sponsors, vocational planners, WIN planners, and career guidance counselors could feasibly develop training programs for these occupations. None of these selected occupations would require lengthy college programs, but rather vocational training programs or short-term college

courses.

As explained in other narrative in this report, CDET data represents approximately 25 percent of the universe and should be used with this limitation in mind. In order to juxtapose the supply side of these occupations, a series of tables in the statistical appendix will delineate applicants registered, openings received, openings filled and unfilled. This data, combined with the data listing job requirements and wages, can be of considerable help to training-program planners.

THE UNEMPLOYED IN COLORADO

Information relating to the numbers, demography, social, and economic conditions of the unemployed is one of the more critical needs of CETA Prime Sponsors, vocational educators, counselors, and planners.

National and state data is available through the Current Population Reports, Special Studies, and monthly household surveys, but current local information is sparse and primarily dependent on 1970 Census-based data. The ETA and BLS recommend to state ES agencies that thay could apply national- and state-level changes that have occurred since 1970 to the subareas of the state for updated information. This procedure at least acknowledges that changes have occurred, but it also makes the assumption that the changes at the local levels are similar to state and national changes. If we have no other source of information, this data can be of help in planning, as long as the user is aware of the limitations.

A second recommendation from ETA is to utilize the information resident in the CDET automated reporting system, which collects demographic and services data for all registered applicants. The oft-quoted misgivings concerning utilization of this information are that it contains biases and is not representative of the universe. These limitations exist, but a review of some national data relative to annual average unemployed, total number unemployed during a year, and total new applicants and renewals registered with the employment service may indicate that the representation is closer to the universe than is commonly believed:

United States
(In Thousands)

	Annual Average Unemployed	Total Number Unemployed	Ratio Total Unemp. / AA Unemp.	U.S. New Apps., Renewals	% of Total Unemp.	Ratio to AA Unemp.
1975	6855	19512	2.84	15035	77.0	2.19
1976	7288	20447	2.81	15072	74.0	2.07
1977	7830	21104	2.70	15817	75.0	2.02

These numbers indicate that there are approximately three times as many persons unemployed during a year than the annual average number of persons unemployed. The data further indicates that new and renewal applicant numbers were approximately 75 percent of the total numbers of persons unemployed during the year, and additionally, that the numbers of new

and renewal applicants are approximately two times as great as the annual average unemployed.

A seemingly contradictory and unexplainable statistic in Employment and Earnings indicates that approximately 26 percent of all jobseekers use the public employment agency, yet the data above indicates almost 2.5 times that many.

These statistics are presented so that users of employment service data can be made aware that the information may be more reflective of the universe than has been generally acknowledged.

The following racial distributions of our population projections, employment status estimates, and actual ESARS proportions affirm the fact that the biases are not that great in selected data elements:

Approximately 92 to 95 percent of the CDET applicants are unemployed when they register with the Colorado Job Service Centers.

Highlights of these characteristics of registered applicants are:

- there are twice as many female welfare recipients as there are male welfare receipients in all jurisdictions.

- the economically disadvantaged range from a low of 19 percent males in Jefferson County to a high of 48.7 percent in Denver.

- approximately 45 percent of registered applicants in Pueblo are Hispanic, the highest ratio of the ten CETA Prime Sponsor areas, with Denver having the seond-highest Hispanic representation at approximately 25 percent. Balance of State and Adams County reflect the third- and fourth-highest proportions at 18.5 and 17 percent respectively. The highest proportion of black applicants is represented in Denver County, representing approximately 23 percent of the total; El Paso County is second with approximately 9.5 percent, and all other Prime Sponsor areas range from a low of less than two percent in Boulder to a high of 8.5 percent in Balance of State. Denver leads other areas in representation of other minorities, with Balance of State a close second.

Evaluating the services rendered to special applicant groups can be a very helpful tool to ES managers and administrators, as well as to CETA Prime Sponsors and other employ-

ment program specialists. The failures and success that the employment service experiences can help determine which groups of individuals need the advantages of programs administered by CETA, and which services are more effective than others.

In FY 1979, the CDET registered approximately 273,800 applicants. 44 percent were female, 27 percent were youth under 22, approximately 11 percent were older workers, 19 percent were veterans of which eight percent were Vietnam veterans, 24 percent were minorities, 27 percent were economically disadvantaged, four percent were handicapped, and approximately six percent were migrant/seasonal farmworkers. Counseling services were very adequately given to all applicant groups relative to their proportions of the total. Placements-after-counseling proportions were less than the proportion to total applicants for females, youth, and older workers and exceeded the proportions to total for all other applicant groups.

Job Development contacts were not made equally for all target groups relative to their proportions to total. Females represented 44 percent of total applicants, but only 29 percent of the Job Development contacts were made for females. The only other group for whom Job Development contacts fell below its total representation was youth, the ratio being 27 percent registered and 18 percent job developments. On the other hand, veterans comprised only 19 percent of the total applicant population, and almost 51 percent of the Job Development contacts made were for veterans. Placement as a result of Job Development was quite successful for all groups.

Another measure of success is the wage rates at which applicants are being placed. All target groups were placed in jobs paying $4.00 and hour or more relative to their approximate proportion to total applicants except the female; 44 percent of total applicants were female, but only 15.5 percent of placements in jobs paying $4.00 an hour or over were made for females.

Another source of information concerning the unemployed in Colorado is developed from those people registering for unemployment insurance. There are two sources of information available, a report emanating from the unemployment insurance program based on a 20-percent sample and data recorded in ESARS relative to eligible claimants. Approximately 27 percent of registered applicants are claimants.

ESARS reports show that 78 percent of claimants are white non-Hispanic, approximately 6.5 percent are black, 14.5 per-

cent are Hispanic, and 1.0 percent is all other minorities. Almost 73 percent of claimants are between the ages of 22 and 44, 12.5 percent are under 22, and 15 percent are 45 or over. Approximately 23 percent of eligible claimants are veterans, and 18 percent are economically disadvantaged. Only ten percent of all claimants were placed by the employment service during Fiscal Year 1979, 42 percent were inactivated with no service, and another 28 percent were inactivated with services other than placement.

This group of registered applicants is not receiving services relative to its proportion to total applicants, and therefore should be another target group that program administrators should include in their universe of needy people requiring employment-related services.

Information not available through ESARS, but produced by the unemployment insurance program, includes duration of unemployment, occupational skills of claimants, and numbers of interstate claimants. 44.5 percent of all claimants were unemployed from one to four weeks in 1979, 41.5 percent from five to fourteen weeks, and almost 14 percent for fifteen weeks or longer. It is interesting to note that during 1979, the unemployment rate was held to an average of 3.3 percent for the year, and that the 75,000-job growth that Colorado experienced was reflected in a smaller proportion of long-term unemployed (15 weeks and over) than nationally. The national 1979 annual average unemployment rate was 5.8 percent, and those unemployed 15 weeks or over approximated 20 percent.

Occupations of last employment of claimants from both files show the following ratios:

	Insured Unemployment Reports	ESARS Reports
All occupations	100.0	100.0
Professional, technical, managerial	18.3	21.9
Clerical	14.5	19.9
Sales	4.6	5.9
Services	10.1	11.1
Agriculture, forestry, fishing	1.4	1.6
Processing	3.5	2.3
Machine	4.1	5.4

	Insured Unemployment Reports	ESARS Reports
Benchwork	4.2	5.3
Structural	22.2	14.4
Miscellaneous	9.4	11.2
N.E.C.	7.7	1.1

Lastly, estimated numbers of individuals who are eligible for CETA programs and employment-related services are produced for the specific Prime Sponsor areas by ethnicity. The specific groups are defined by the Department of Labor (DOL) as those individuals in poverty, welfare recipients, total number of individuals unemployed during the year, those who are employed part-time for economic reasons, unemployed Vietnam-era veterans, and the long-term unemployed. Users of this data are cautioned to read the methodology utilized to estimate these targeted population and understand the limitations of their accuracy in absolute numbers.

METHODOLOGY FOR ESTIMATES OF CETA-ELIGIBLE POPULATIONS

As a part of a continuing effort to improve the Labor Market Information (LMI) available to CETA Prime Sponsors, the U.S. Department of Labor (DOL) contracted to produce estimates from the 1976 Survey of Income and Education and the March Current Population Surveys (CPS) of CETA-eligible populations for the fifty states dated 1977 and 1978.

Because the data are based on a sample survey, sampling errors may preclude meaningful separate tables for any race/sex group with a total population of 300,000 or less. Therefore, the data cannot be presented at Prime Sponsor levels.

At the suggestion of the DOL, data from ESARS could be used to complement the CPS data to produce "best" local estimates. In an effort to supply as much local demographic data to Prime Sponsors as possible (see page 89), information is supplied from the ESARS files, as well as are the CPS CETA-eligible populations at the state level.

The user is to be cautioned that all demographic ratios presented are taken from the ESARS active file at the end of fiscal year 1979 and naturally exclude eligible persons who have not registered with the Colorado Division of Employment and Training for employment-related services.

METHODOLOGY FOR ESTIMATING NUMBERS OF INDIVIDUALS NEEDING MANPOWER SERVICES IN 1981

I. Poverty

1. Base data - total persons in poverty, all ages, from Survey of Income and Education (SIE) for state, 1975.

2. Calculated the 1975 proportion of poor at state level from SIE's persons in poverty, all ages, divided by all persons, all ages, e.g., $\frac{230000}{2536000} = 9.1$

3. Calculated the 1970 Census proportion of poor at state level (Table 58, General Social and Economic Characteristics, PC(1)C7), i.e., $\frac{263000}{2207259} = 11.9$

4. $\frac{230000}{2541000} / \frac{263000}{2207259} = .7647$, where P = the rate of change of persons in poverty in 1975.

5. 1981 subarea estimates of persons in poverty = 1970 ratios times .7647 for each area, multiplied by estimated 1981 population, e.g., for Adams County:

$$\frac{\text{1970 persons in poverty}}{\text{1970 population}} \text{ or } \frac{12425}{185789} \times .7647,$$

multiplied by 1981 projected population (258168) = 1981 estimated persons in poverty in Adams County (13202).

6. Ethnic/race ratios from ESARS active file of disadvantaged applicants (Table 93).

II. Welfare recipients

1. CPS estimates for 1978 - 75000
Total population - 2541000

$\frac{75000}{2541000} = .0295$ X 1981 estimated population (3072671) = estimated 1981 welfare recipients (90693).

Adjustment made for rounding and adding to state totals.

2. *Area welfare recipients determined by dividing 1977 average of total recipients for each area by state, and multiplying this by 1981 estimated welfare recipients, e.g.,*

$$\frac{\text{Adams February 1977 average (9832)}}{93789} \times 90693 = 9507$$

3. *Ethnic/race ratios from ESARS active applicants registered as welfare recipients (Table 93).*

III. *Total number of different individuals unemployed during the year*

1. *Averaged total national unemployed individuals and annual average unemployed individuals for years 1966-1977.*

$$\frac{15486000}{473100} = 3.27 \times \text{estimated state 1981 average unemployment (61185)} - 200075$$

2. *Area estimates derived same way.*

3. *Race/ethnic ratios from ESARS applicant population registered as unemployed.*

(Source: Employment and Training Report of the President, 1979, Tables A1 and B18)

IV. *Employed part-time for economic reasons*

1. *National ratio of employed part-time for economic reasons is divided by total employed, then multiplied by employment estimate for each area:*

$$\frac{3478000}{96945000} \times 1468415 = 52680$$

(Source: Employment and Earnings, January 1980, Table 46)

2. *Race/ethnic ratios from ESARS applicant population registered as employed part-time.*

V. Unemployed Vietnam veterans aged 20 years and over

1. Used ESARS applicant population to determine proportion of Vietnam veterans to total veterans:

$$\frac{21857}{51419} = 42.51$$

2. Used Department of Social Services estimates of total 1978 veteran population:

373829 X .4251 = 158915 (estimated Vietnam veteran population)

3. Used national participation rate of male Vietnam veterans 20 years old and over:

$$\frac{8111000 \text{ (labor force)}}{8524000 \text{ (population)}} = 95.15\%$$

X Colorado estimate of Vietnam veteran population (158915) = 151215, the estimated 20-years-old-and-over Vietnam veterans in the labor force

4. Applied national unemployment rate for 20-years-old-and-over Vietnam veterans to estimated labor force)151215 X .043) = 6502 unemployed males in 1979.

Applied 1979 ratios of Vietnam-veteran unemployed to total male unemployed:

$$\frac{6502}{25277} \text{ X 1981 estimated total male unemployed (34484) = estimated 1981 male Vietnam-veteran unemployed aged 20 years and over (8766)}$$

(Source: Employment and Earnings, January 1980, Table 56)

5. Race/ethnic ratios from ESARS population registered as Vietnam-veteran applicants.

VI. Long-term unemployed (15 weeks or more)

1. Averaged long-term unemployed from 1969-1979 from na-

tional data.

2. *Applied this ratio to estimated average unemployment for projected year, e.g.,*

   61185 X .2265 = 13858
   (Source: Employment and Training Report of the President, 1979, Table A26)

3. *Race/ethnic ratios from ESARS applicant population registered as unemployed.*

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Employed - those individuals, 16 years old or older, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive order - a formal document issued by the President of the United States (or in Colorado, the governor) which has the force of law. Executive orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local office has been hired by an employer and has entered the job.

HEW - the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education)

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

Job Development contact - the process of soliciting a public or private employer's order for a specific applicant for whom the local office has no suitable opening currently on file.

LMA - labor market area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultutal-establishment employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement" (q.v.). This term is applied to WIN registrants only.

Placement - the hiring by an employer of an individual referred by a Job Service Center for a job or an interview, provided the Job Service completed all of the following steps: (1) made prior arrangements with the employer for the referral of one or more individuals; (2) referred an individual who had not been specifically designated by the employer for referral; (3) verified from a reliable source (preferably the employer) that the individual has entered on the job; and (4) prepared a job order form prior to referral and recorded the placement on the appropriate forms.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC - standard industrial classification

SMSA - standard metropolitan statistical area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN - Work Incentive Program

NEW DEPARTMENT OF LABOR REGULATIONS FOR CLASSIFYING LABOR SURPLUS AREAS

[4510-30-M]

Title 20—Employees' Benefits

CHAPTER V—EMPLOYMENT AND TRAINING ADMINISTRATION, DEPARTMENT OF LABOR

PART 651—GENERAL PROVISIONS GOVERNING THE FEDERAL-STATE EMPLOYMENT SERVICE SYSTEM

PART 654—SPECIAL RESPONSIBILITIES OF THE EMPLOYMENT SERVICE SYSTEM

Preference in Federal Procurement Under Defense Manpower Policy DMP-4A and Executive Orders 12073 and 10582

MODIFICATION OF RULES FOR CLASSIFYING LABOR SURPLUS AREAS

NOTE.—This document originally appeared in the FEDERAL REGISTER for January 3, 1979. It is reprinted in this issue to meet requirements for publication on the Tuesday/Friday schedule assigned to the Labor Department. (See OFR notice 41 FR 32914, August 6, 1976.)

AGENCY: Employment and Training Administration, Labor.

ACTION: Final rule.

SUMMARY: The Department of Labor is modifying its rules for classifying labor surplus areas under Defense Manpower Policy DMP-4A and Executive Order 10582 to reflect the promulgation of Executive Order 12073 and changes being made as a result of comments received.

EFFECTIVE DATE: January 1, 1979.

FOR FURTHER INFORMATION CONTACT:

Davis A. Portner, Office of Policy Evaluation and Research, 601 "D" Street, N.W., Room 9420, Washington, D.C. 20213, (202) 376-6274.

SUPPLEMENTARY INFORMATION:

BACKGROUND

Defense Manpower Policy No. 4A (DMP-4A), 32A CFR Part 134, became effective November 3, 1977. The purpose of DMP-4A is to encourage the purchase of goods and services by the Federal Government and the placement of Federal facilities in areas of labor surplus. Under DMP-4A the Secretary of Labor is required to classify labor surplus areas and disseminate this information for the use of all Federal agencies in directing procurement activity and locating new plants or facilities. Firms which agree to perform most of the work in labor surplus areas are eligible for preference in the award of procurement contracts and grants and the execution of agreements.

On March 3, 1978, the Department of Labor published in the FEDERAL REGISTER final regulations for classifying labor surplus areas under Defense Manpower Policy DMP-4A and Executive Order 10582. In order to implement DMP-4A as rapidly as possible, the Department shortened the period for comment on the proposed regulations and accepted comment during the 60 day period subsequent to the publication date of the final regulations.

On August 16, 1978 the President signed Executive Order 12073—Federal Procurement in Labor Surplus Areas. This executive order strengthened DMP-4A and provided additional authority for the Department's implementing regulations in 20 CFR Part 654.

At this time the Department is making revisions and corrections to these regulations primarily as a result of the comments which were received and the promulgation of the executive order. The changes also reflect the Department's experience under these regulations.

SUMMARY OF CHANGES

The primary objective of these changes is to more effectively accomplish the purpose of DMP-4A to target Federal procurement to areas of greatest need. Effective targeting is a goal of the strengthened procedures in E.O. 12073 and a central concern of the comments received on the Department's regulations.

A review of operating data indicates that the present criteria used for classifying labor surplus areas are too broad for the effective targeting of Federal funds. Based on comments received and internal analysis, the Department of Labor has concluded that the criteria for classifying labor surplus areas should be focused more sharply on communities with problems of chronically high unemployment which have the greatest need of the labor surplus set aside program. To accomplish this objective the following changes are being made in the system for defining program eligibility.

1. In order to focus programs more sharply on the community level, labor surplus will no longer be defined in terms of broad geographic areas in which there is a concentration of economic activity or labor demand and in which workers can generally change jobs without changing their residences. Instead, the conditions for defining labor surplus will be in terms of discrete civil jurisdictions, i.e., counties, county equivalents, and cities with a population of at least 50,000. In this way, funds will be directed to specific localities with high unemployment rather than to all jurisdictions in any given metropolitan area, not all of which suffer from the same degree of unemployment.

2. In order to target procurement contracts to localities with the greatest degree of unemployment, eligibility will be limited to those jurisdictions which have an average unemployment rate which is 120 percent of the national unemployment rate or higher during the reference period.

3. The reference period used in making the classifications will be an average of the previous two calendar years. By using an average of 24 months of unemployment data in place of the present 12 months, it should be possible to target contracts into communities experiencing high structural unemployment.

4. Eligibility status will be determined annually (rather than quarterly) effective each May 1. The purpose of this change is to provide more stability in the contracting process.

5. In classifying labor surplus areas for those jurisdictions in standard metropolitan statistical areas for which the current population surveys (CPS) were used to determine the annual unemployment data prior to January 1, 1978, the Assistant Secretary shall make determinations of the average unemployment rates in such jurisdictions. The purpose of this change is to prevent these areas from being penalized by the change in the unemployment estimating procedures involving the discontinuation of separate CPS estimates for these areas.

Since these regulations involve a matter relating to "public property, loans, grants, benefits, or contracts" they are exempt from the rulemaking requirements of the Administrative Procedure Act. (5 U.S.C. § 553(a)(2)). Moreover, the Secretary of Labor has determined that it is in the public interest to publish these regulations in final form so that program implementation may move more rapidly without disruption of the Federal procurement process. This finding constitutes a waiver of the Department's regulation in 29 CFR 2.7. These rules will therefore become effective January 1, 1979.

Accordingly, Parts 651 and 654, Chapter V, Title 20 of the Code of Federal Regulations are amended as follows:

PART 651—GENERAL PROVISIONS GOVERNING THE FEDERAL-STATE EMPLOYMENT SERVICE SYSTEM

1. The table of contents for Part 654—Special Responsibilities of the Employment Service System is amended to read as follows:

* * * * *

§ 651.6 Consolidated table of contents for Parts 651-658.

654.6 Termination of classification.
654.7 Publication of area classifications.
654.8 Services to firms and individuals in labor surplus areas.
654.9 Filing of employment service-related complaints.

SUBPART B—RESPONSIBILITIES UNDER EXECUTIVE ORDER 10582

654.11 Purpose of subpart.
654.12 Description of Executive Order 10582.
654.13 Determination of areas of substantial unemployment.
654.14 Filing of employment service-related complaints.

SUBPART C—TRANSITION PROVISIONS

654.21 Interim classifications.

PART 654—SPECIAL RESPONSIBILITIES OF THE EMPLOYMENT SERVICE SYSTEM

2. Part 654, in its entirety, is amended to read as follows:

SUBPART A—RESPONSIBILITIES UNDER DEFENSE MANPOWER POLICY NO. 4A (32A CFR PART 134) AND EXECUTIVE ORDER 12073

654.1 Purpose of subpart.
654.2 Description of DMP-4A.
654.3 Description of Executive Order 12073.
654.4 Definitions.
654.5 Classification of labor surplus areas.
654.6 Termination of classification.
654.7 Publication of area classifications.
654.8 Services to firms and individuals in labor surplus areas.
654.9 Filing of employment service-related complaints.

SUBPART B—RESPONSIBILITIES UNDER EXECUTIVE ORDER 10582

654.11 Purpose of subpart.
654.12 Description of Executive Order 10582.
654.13 Determination of areas of substantial unemployment.
654.14 Filing of employment service-related complaints.

SUBPART C—TRANSITION PROVISIONS

654.21 Interim classifications.

AUTHORITY: Pub. L. 95-89; 50 U.S.C. App. 2061, et seq.; 41 U.S.C. 10a et seq.; 29 U.S.C. 49 et seq., E.O. 12073; E.O. 11725; E.O. 11051, as amended; E.O. 10582; E.O. 10480; 32A CFR Part 134.

Subpart A—Responsibilities Under Defense Manpower Policy No. 4A (32A CFR Part 134) and Executive Order 12073

§ 654.1 Purpose of subpart.

This subpart implements the responsibilities of the Secretary of Labor in classifying labor surplus areas in accordance with Defense Manpower Policy No. 4A of the Federal Preparedness Agency, General Services Administration (32A CFR Part 134—Preservation of the Mobilization Base Through the Placement of Procurement and Facilities in Labor Surplus Areas (DMP-4A)), and Executive Order 12073 (Federal Procurement in Labor Surplus Areas). The Secretary of Labor has delegated responsibilites to the Assistant Secretary, Employment and Training Administration.

§ 654.2 Description of DMP-4A.

(a) Defense Manpower Policy No. 4A (DMP-4A) consists of the Federal regulations at 32A CFR Part 134—Preservation of the Mobilization Base Through the Placement of Procurement and Facilities in Labor Surplus Areas.

(b) The DMP-4A regulations were issued pursuant to Pub. L. 95-89; Executive Order 10480; Executive Order 11051, as amended; and Executive Order 11725. Implementation of the regulations is the responsibility of the Federal Preparedness Agency of the General Services Administration.

(c) The purpose of DMP-4A is to encourage the purchase of goods and services by the Federal Government and the placement of Federal facilities in areas of labor surplus.

(d) Under DMP-4A, the Secretary of Labor is required to:

(1) Classify labor surplus areas and disseminate this information on a timely basis to Federal departments and agencies.

(2) In cooperation with State and local authorities and the Secretary of Commerce, provide labor-market data and related economic information in efforts to assist in the initiation of industrial expansion programs in labor surplus areas.

(3) Identify occupations and skills which are in surplus supply within labor surplus areas and make this information available to firms requiring such occupations and skills and interested in establishing new plants and facilities.

(4) Identify occupations and skills for which labor will be needed by new or expanding industries and industries that expand during a mobilization; and, in collaboration with other Government agencies, make assistance available to labor surplus area institutions and users in developing on-the-job, apprentice, or other training programs for developing skills of the work force.

(5) Through the affiliated State employment services, receive job openings on a voluntary basis and/or under the mandatory listing program provided for by section 2012 of Title 38 of the United States Code and by Executive Order 11701, and refer qualified unemployed workers to concerns in labor surplus areas.

(e) Under DMP-4A, all Federal agencies are required to:

(1) Use their best efforts to award all procurement contracts and grants, and execute agreements, greater than $2,500 to concerns that will perform a substantial proportion of the manufacturing, production, or appropriate services on those contracts within labor surplus areas, to the extent that procurement objectives will permit.

(2) Ensure that firms in labor surplus areas that are on appropriate bidders mailing lists are given the opportunity to submit offers on all procurements for which they are qualified. Whenever the number of firms on a bidders mailing list is excessive in relation to size and type of procurement, a representative number of firms from labor surplus areas shall be given the opportunity to submit offers.

(3) Establish programs to encourage prime contractors to award subcontracts to firms that agree to perform a substantial proportion of the production, manufacturing or appropriate services on those subcontracts in labor surplus areas.

(4) Cooperate with other Federal departments and agencies in achieving the objectives of this policy.

(f) Under DMP-4A, the Secretary of Commerce is required to:

(1) In cooperation with State economic development agencies, the Secretary of the Defense, the Administrator of General Services, and the Administrator of the Small Business Administration, assist concerns which have agreed to perform contracts in labor surplus areas in obtaining Government procurement business by: (A) Providing such concerns with timely information on proposed Government procurements; and (B) maintaining current information on the manufacturing capabilities of such concerns with respect to Government procurement and disseminating such information to Federal departments and agencies.

(2) Urge concerns planning new production facilities to consider the advantages of locating in labor surplus areas.

(3) Provide technical advice and counsel to groups and organizations in labor surplus areas on planned industrial parks, industrial development organizations, expanding tourist business, and available Federal aids.

(g) Under DMP-4A, the Administrator of the Small Business Administration is required to make available to small business concerns in labor surplus areas all of its services, endeavor to ensure opportunity for maximum participation by such concerns in Government procurement, and give consideration to the needs of these concerns in the making of joint small business set asides with Government procurement agencies.

(h) Under DMP-4A, there is continued in operation within the Federal Preparedness Agency the Surplus Manpower Committee. The Committee is chaired by the Director of the Federal Preparedness Agency or the Director's designee. The Committee

includes representation from the Office of Federal Procurement Policy; Department of Defense; Department of Commerce; Department of Labor; General Services Administration; Small Business Administration; Department of Health, Education, and Welfare; Department of Housing and Urban Development; Department of Energy; and other interested departments and agencies. The Committee advises the Director, Federal Preparedness Agency, on policies, procedures, and activities in existence or needed to carry out the purpose of DMP-4A.

(i) When an entire industry that sells a significant portion of its production to the Government is generally depressed or has a significant proportion of its production units located in a labor surplus area, the Committee may make appropriate recommendations relative to that industry in lieu of recommendations relative to specific geographical areas. In such cases, after notice and hearing of interested parties, the Director, Federal Preparedness Agency, gives consideration to appropriate measures applicable to the entire industry.

(j) Under DMP-4A, all Federal agencies are required to give consideration to labor surplus areas in the selection of sites for Government-financed facilities, including expansion, to the extent that such selection is consistent with existing law and essential economic and strategic factors that must also be taken into account.

§ 654.3 Description of Executive Order 12073.

Executive Order 12073 also requires executive agencies to emphasize procurement set-asides in labor surplus areas. The Secretary of Labor is responsible under this order for classifying and designating labor surplus areas.

§ 654.4 Definitions.

(a) "Assistant Secretary" shall mean Assistant Secretary for Employment and Training, U.S. Department of Labor.

(b) "Civil jurisdiction" shall mean:

(1) Cities of 50,000 or more population on the basis of the most recently available Bureau of the Census estimates; or

(2) Towns and townships in the States of New Jersey, New York, Michigan, and Pennsylvania of 50,000 or more population and which possess powers and functions similar to cities; or

(3) All counties, except those counties which contain any of the types of political jurisdictions defined in (1) and (2) above.

(4) All other counties are defined as "balance of county" (i.e., total county less component cities and townships identified in (1) and (2) above).

(5) County equivalents which are towns in the States of Massachusetts, Rhode Island and Connecticut.

(c) "Labor surplus area" shall mean a civil jurisdiction that, in accordance with the criteria specified in § 654.5, has been classified as a labor surplus area for purposes of Defense Manpower Policy No. 4A.

(d) "Reference period" shall mean the two year period ending December 31 of the year prior to the May 1 annual date of eligibility determination.

§ 654.5 Classification of labor surplus areas.

(a) *Basic criteria.* The Assistant Secretary shall classify a civil jurisdiction as a labor surplus area whenever, as determined by the Bureau of Labor Statistics, the average unemployment rate for the civilian labor force in the civil jurisdiction for the reference period is (1) 120 percent of the national average unemployment rate or higher for the reference period as determined by the Bureau of Labor Statistics, or (2) 10 percent or higher: *Provided, however,* That no civil jurisdiction shall be classified as a labor surplus area if the average unemployment rate for the reference period is less than 6.0 percent.

(b) In classifying civil jurisdictions within those standard metropolitan statistical areas and for central cities for which current population surveys (CPS) were used to determine annual unemployment data prior to January 1, 1978, the Assistant Secretary shall, until the end of Fiscal Year 1981, make determinations of the average unemployment rates in such jurisdictions so as to assure that eligibility is not denied by the termination of the use of such surveys.

(c) *Criteria for exceptional circumstances.* The Assistant Secretary, upon petition submitted by the appropriate State employment security agency, may classify a civil jurisdiction as a labor surplus area without regard to the reference period, whenever the civil jurisdiction meets or is expected to meet the unemployment tests established under § 654.5 (a) or (b) as a result of exceptional circumstances. For purposes of this paragraph, "exceptional circumstances" shall mean catastrophic events such as natural disasters, plant closings, and contract cancellations expected to have a long-term impact on labor market area conditions, discounting temporary or seasonal factors.

§ 654.6 Termination of classification.

(a) *Basic procedure.* The Assistant Secretary shall terminate the classification of a civil jurisdiction as a labor surplus area after any year in which the Assistant Secretary determines that the criteria established under § 654.5 (a) and (b) are no longer met.

(b) *Procedure for exceptional circumstances.* The Assistant Secretary shall terminate the classification of a civil jurisdiction classified as a labor surplus area pursuant to the provisions of § 654.5(c) after any year in which the Assistant Secretary determines that the exceptional circumstances criteria of that paragraph are no longer met.

§ 654.7 Publication of area classifications.

The Assistant Secretary shall publish annually a list of labor surplus areas together with geographic descriptions thereof.

§ 654.8 Services to firms and individuals in labor surplus areas.

To carry out the purposes and policy objectives of Defense Manpower Policy No. 4A and Executive Order 10582, the Assistant Secretary shall cooperate with and assist the State employment service agencies and the Secretary of Commerce, as appropriate to:

(a) Provide relevant labor market data and related economic information to assist in the initiation of industrial expansion programs in labor surplus areas;

(b) Identify upon request the skills and numbers of unemployed persons available for work in labor surplus areas, providing such information to firms interested in establishing new plants and facilities or expanding existing plants and facilities in such areas;

(c) Identify the occupational composition and skill requirements of industries contemplating locating in labor surplus areas and make such information available to training and apprenticeship agencies and resources in the community for purposes of appropriate training and skill development;

(d) Identify unemployed individuals in need of, and having the potential for, training in occupations and skills required by new or expanding industries and refer such individuals to appropriate training opportunities;

(e) Receive job openings on a voluntary basis and/or under the mandatory listing program provided by 38 U.S.C. 2012 and Executive Order 11701 and refer qualified unemployed workers to such openings, making appropriate efforts to refer to such openings qualified individuals who reside in the labor surplus area.

§ 654.9 Filing of employment service-related complaints.

Employment service-related complaints arising under Subpart A of this Part may be filed directly with the ap-

propriate Department of Labor regional office in accordance with the provisions at 20 CFR § 658.420–423. For purpose of § 658.421, a complainant filing a complaint under this subsection shall be deemed to have exhausted the State agency administrative remedies set forth at 20 CFR § 658.410–416.

Subpart B—Responsibilities Under Executive Order 10582

§ 654.11 Purpose of subpart.

This subpart implements the responsibilities of the Secretary of Labor in determining areas of substantial unemployment in accordance with Executive Order 10582 issued pursuant to the Buy American Act, 41 U.S.C. 10a et seq.

§ 654.12 Description of Executive Order 10582.

(a) Under the Buy American Act, heads of executive agencies are required to determine, as a condition precedent to the purchase by their agencies of materials of foreign origin for public use within the United States, (1) that the price of like materials of domestic origin is unreasonable, or (2) that the purchase of like materials of domestic origin is inconsistent with the public interest.

(b) Section 3(c) of Executive Order 10582 issued pursuant to the Buy American Act permits executive agencies to reject a bid or offer to furnish materials of foreign origin in any situation in which the domestic supplier, offering the lowest price for furnishing the desired materials, undertakes to produce substantially all of the materials in areas of substantial unemployment, as determined by the Secretary of Labor.

§ 654.13 Determination of areas of substantial unemployment.

An area of substantial unemployment, for purposes of Executive Order 10582, shall be any area classified as a labor surplus area at § 654.5 of this Part pursuant to the procedures set forth at Subpart A of this Part.

§ 654.14 Filing of employment service-related complaints.

Employment service-related complaints arising under Subpart B of this Part may be filed directly with the appropriate Department of Labor regional office in accordance with the provisions at 20 CFR § 658.420–423. For purposes of §658.421, a complainant filing a complaint under this subsection shall be deemed to have exhausted the State agency administrative remedies set forth at 20 CFR § 658.410–416.

Subpart C—Transition Provisions

§ 654.21 Interim classifications

The transition from the quarterly classification of the March 3, 1978 regulations to the new annual classification system will not be fully accomplished until May 1, 1979. During the interim period, from January 1, 1979 through April 30, 1979, the list of labor surplus areas will be derived as follows:

(a) the list of labor surplus areas under the March 3, 1978 regulations for the quarter ending December 31, 1978 will remain in effect;

(b) the list will be supplemented by any additional labor surplus areas which would have qualified under the March 3, 1978 regulations for the first quarter of calendar year 1979; and

(c) upon petition submitted by the appropriate State employment security agency the Assistant Secretary may classify any civil jurisdiction which meets the basic provisions of § 654.5, as amended, based on the most recent satisfactory 12 months unemployment data.

Signed at Washington, D.C. on 29 December, 1978.

RAY MARSHALL,
Secretary of Labor.
